Chavchavadze Ave.,II, 0128, Tbilisi, Georgia

The problem of soil erosion protection is becoming increasingly important. Georgia is one of the smallest countries globally. As a result of both natural and human sloppy impacts, the soil cover is quite damaged. Pastures are in especially poor conditions.

Pasture soil erosion in Gori district is one of the best examples of the situation in the pastures of our country. Here on pasture, soil are undergoing active erosion, which is caused by indiscriminate grazing.

Natural conditions of Georgia and wrong human economic activities often cause the fast development of soil erosion. Therefore, there must be studied regularity of erosion development and create-introduce activities for prevent soil for erosion.
